# The new era of emergency lighting with **LiFePO4** technology

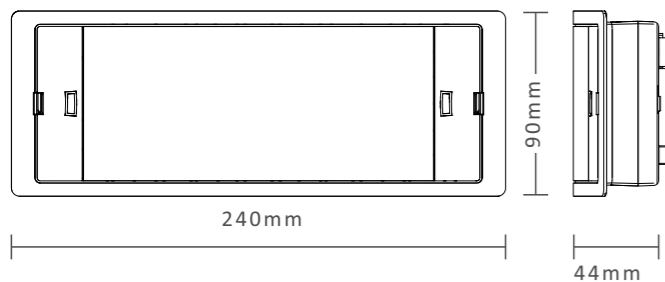

## Advanced LiFePO4 battery technology

The heart of the luminaires beats with a state-of-the-art LiFePO4 battery, delivering long-lasting performance and reliability. This technology comes with a 10-year battery lifespan, ensuring the system remains fully operational for an extended period with minimal maintenance requirements.

Designed for reliable safety coverage, the GR-8/LF and GR-9/LF models provide 1- and 3-hour autonomy, respectively. With an emergency luminous flux of up to 330 lumens, these safety luminaires ensure strong visibility in critical moments. The use of high-quality LEDs with a lifespan of up to 100,000 hours guarantees consistent, reliable lighting and long-term safety for your space. Olympia Electronics' safety luminaires offer a complete solution that combines durability with elegant design.

They can operate in continuous or non-continuous lighting mode and can be easily converted into signage luminaires using the supplied pictograms, covering a viewing distance of up to 15 meters. Additionally, the SP-1008/RLDUB signage panel can be optionally installed, further enhancing visibility and compliance with escape route signage requirements, while allowing the luminaires to function as double-sided signage lights. Their robust ABS/PC construction and easy wall-mounted or recessed installation make them an ideal choice for any modern interior.

DIMENSIONS

### Accessories (Available on demand)

**A-3008**  
Recessed ceiling base

**SP-1008/RLDUBL**  
Double-sided sign with all directions

Recessed installation in suspended ceiling with A-3008 mounting bracket

Recessed installation in suspended ceiling with A-3008 mounting bracket and SP-1008/RLDUB signage panel

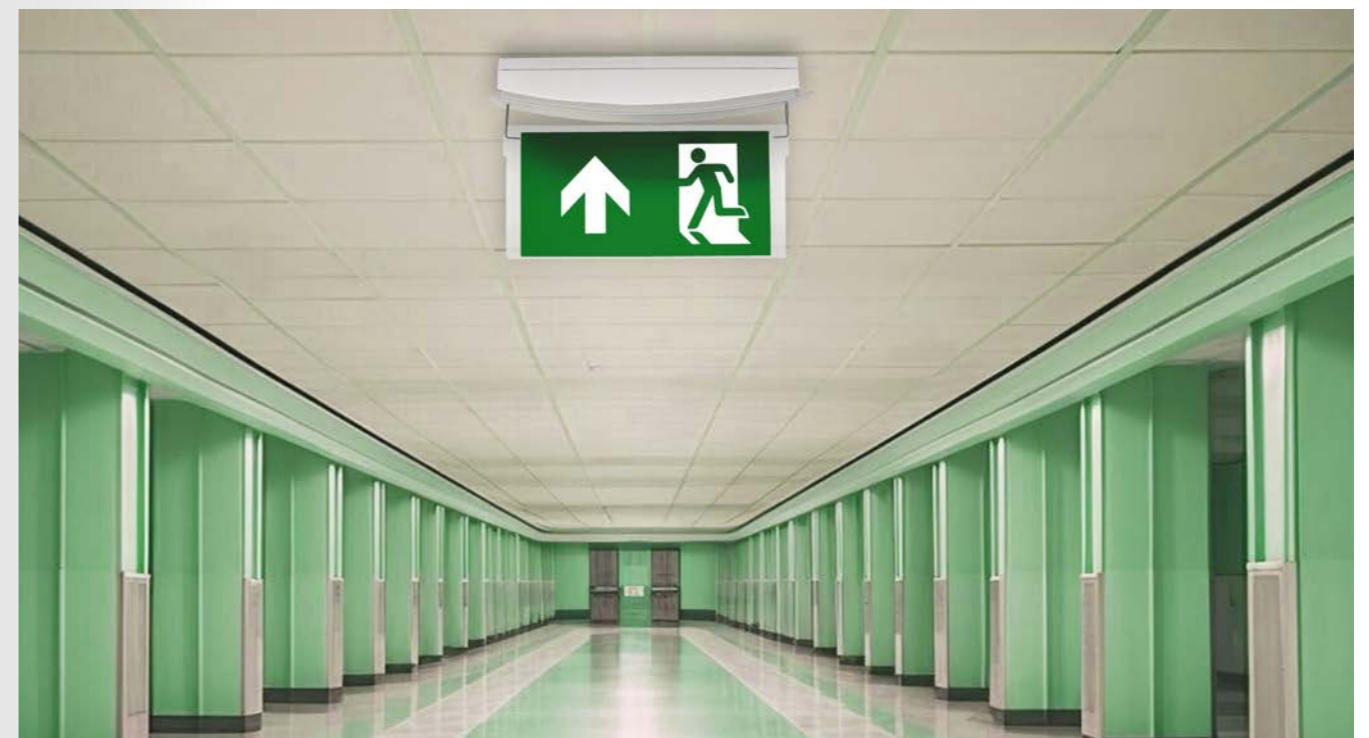

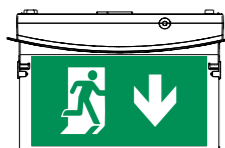

MOUNTING METHODS

### Wall mounting
