SUPER CAPACITOR

Supercapacitors meet environmental standards, hence they are eco-friendly as well as they offer higher reliability of performance than the batteries.

The superior low temperature performance from -40°C + 65°C widens the range of applications and unlike batteries, they don't overcharge and overheat, which offer longer life. In the long run, the fast charging ability and the lifespan ranging from 100,000 to million cycles makes the supercapacitor cost effective solution.
